Ensure proper program management

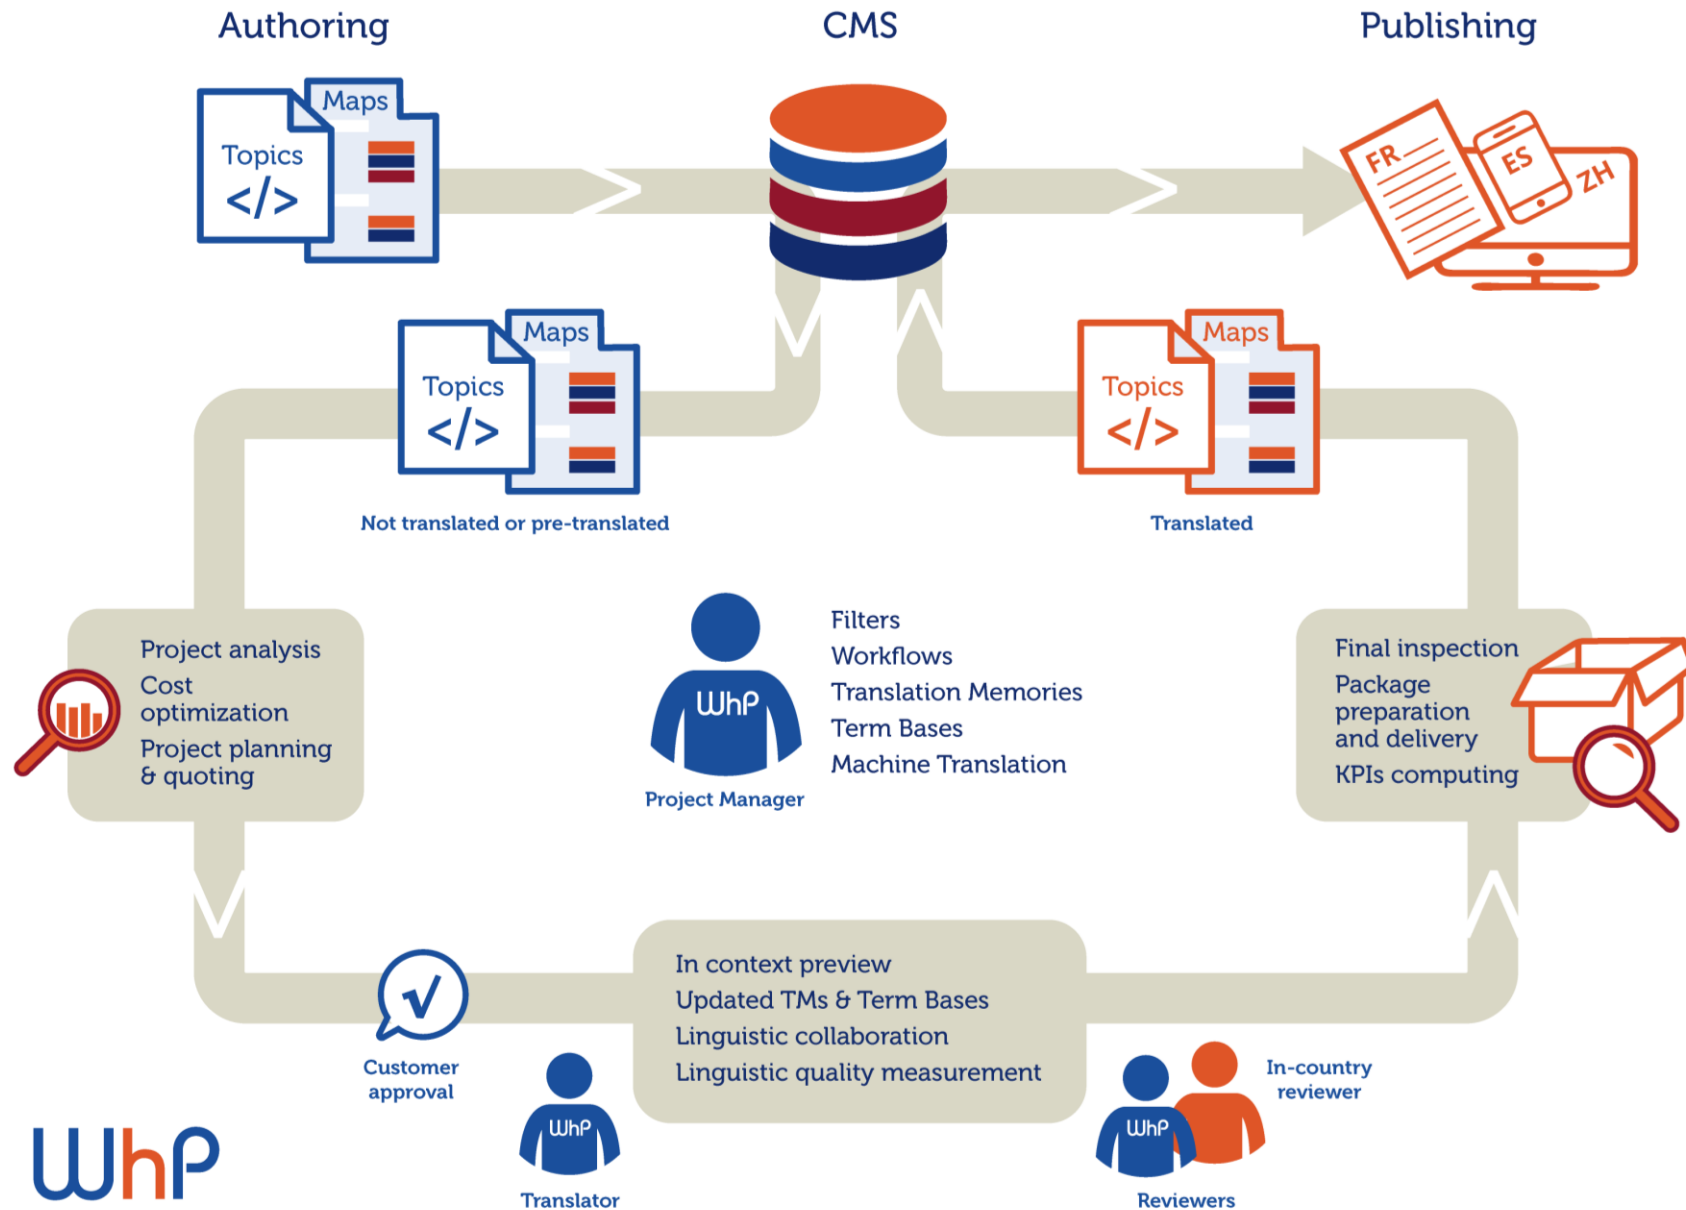

Localization strategy

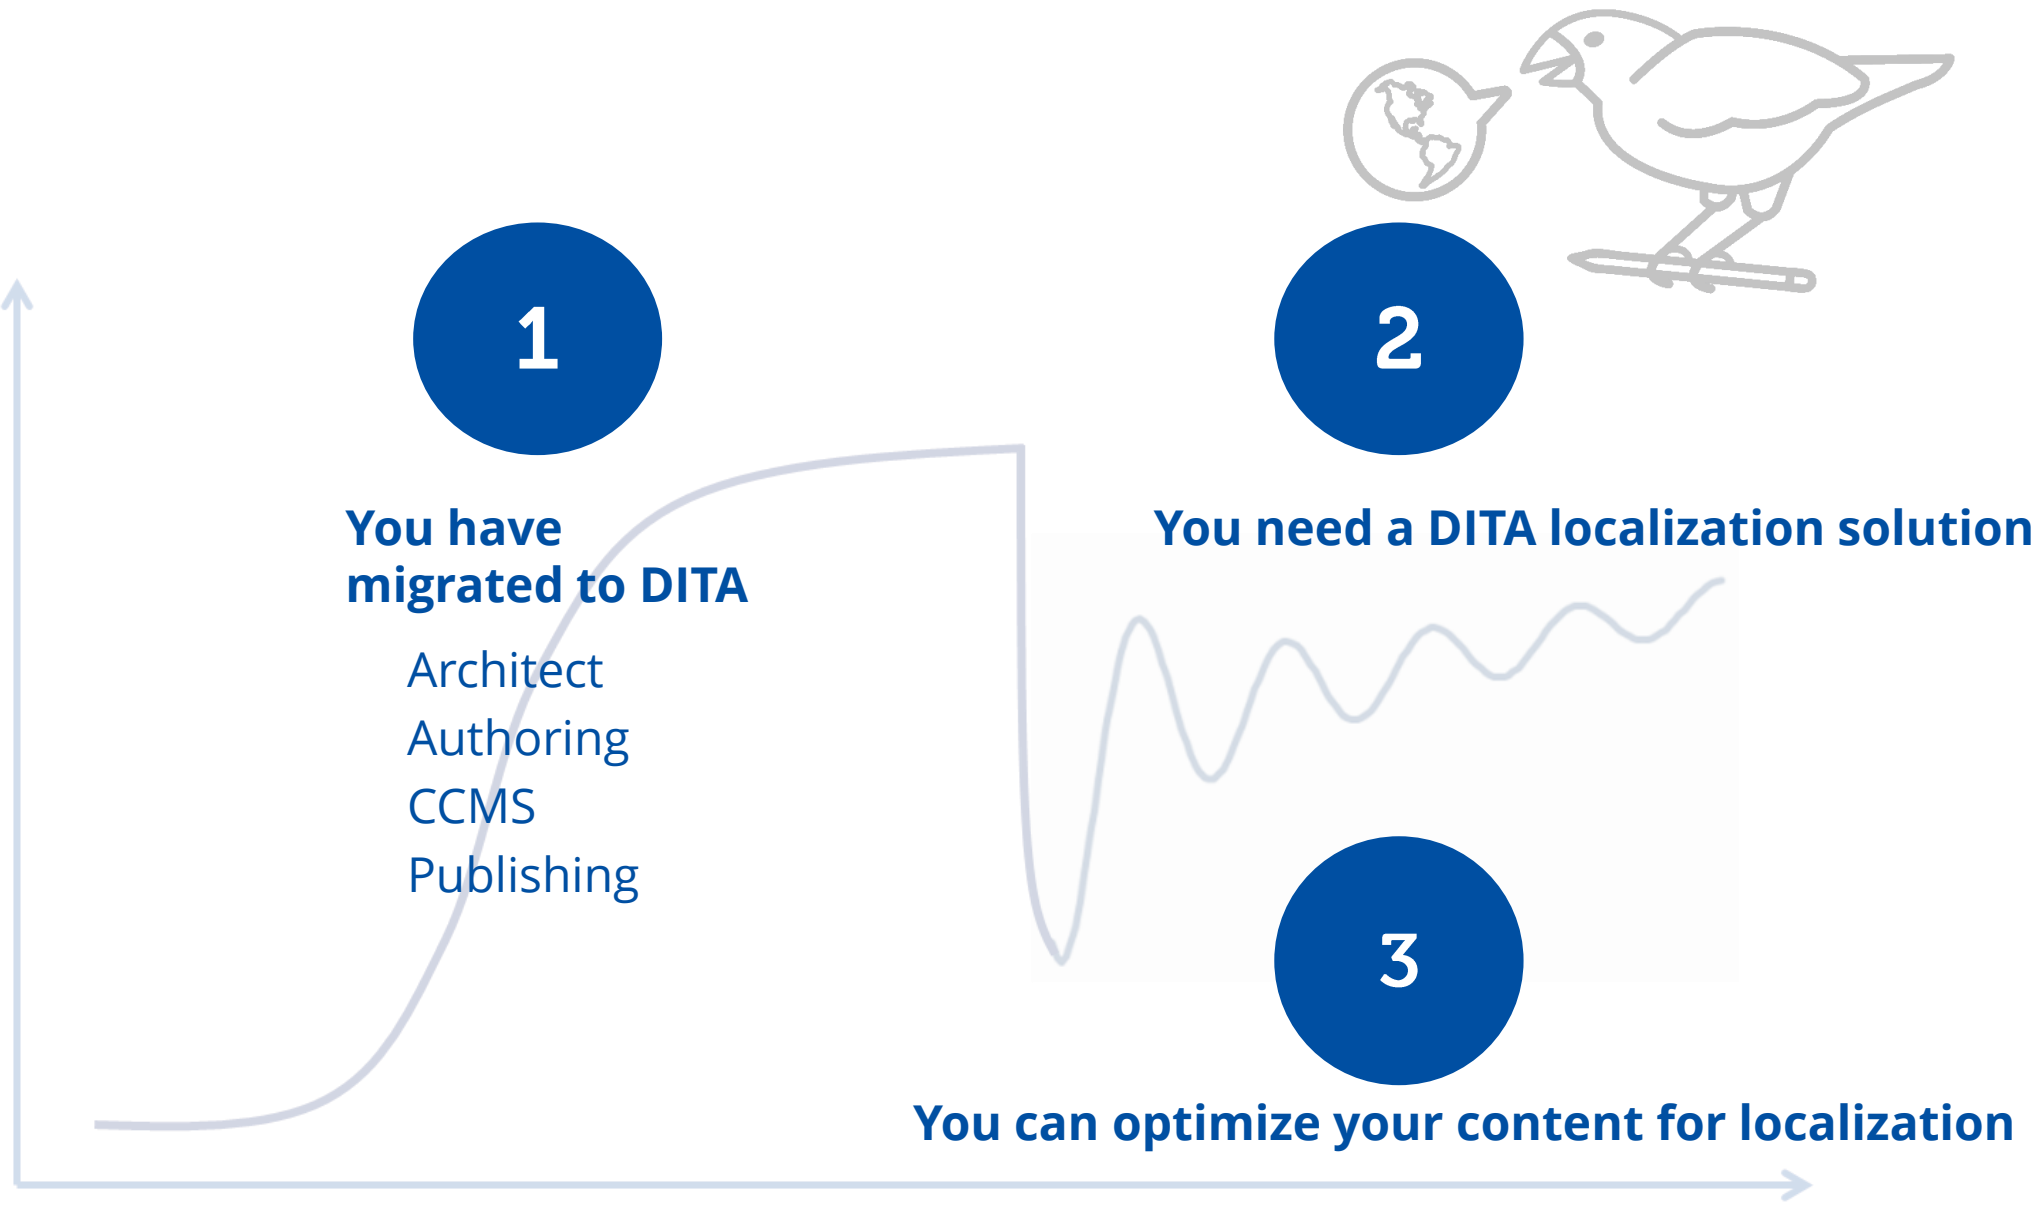

CMS or TMS centric ?

DITA localization workflow

What if process/vendor not suited for DITA

- Your localization process breaks when a new TW is on-boarded
- You spot untranslated content
- Corrected errors still keep happening
- Documents do not publish...
- You spend too much effort teaching your translation vendor
- Fastidious linguistic review
- Too long transition period before process final
- Too many exceptions to handle
- Not enough productivity for your expected ROI

How to proceed?

- ❑ Ask your vendor if they can process DITA

Do you use specializations ?

DITA 1.3 ?

No problem, it's another XML!

Can you send me an Xliff file?

There is a DITA filter in our TMS/CAT...

- ❑ Perform 2-3 Proofs of Concept

With complex content

Let the vendor explain how it is processed

- ❑ A simple test is not relevant

Context

Good Translation requires contextual information

When plain text previous and next strings

When structured content, usually a published PDF

Context preview for the translator

DITA content republished without conditions

Direct access for the translator to the published content

Higher quality, better productivity

No time lost by content manager, project manager and translator

All content displayed

Context

2. Confirm the meter tines are away from the tank wall.

Figure 2. Meter placement (away from tank wall)

- a. 50 mm
- b. 200 mm

3. Confirm the meter tines are immersed in fluid.

Figure 3. Meter placement (immersed in fluid)
